Skills

Observability & Reliability

- Zabbix & Grafana
- Synthetic monitoring
- KPI/SLA dashboards
- Alert tuning & dependency mapping
- Uptime modeling

Automation & Scripting:

- PowerShell & Bash
- Git & GitHub
- REST APIs & JSON-RPC integration
- Monitoring onboarding automation
- Agent remediation

Infrastructure:

- AWS, VMware & Proxmox
- Windows & Linux
- Kubernetes & Docker
- IIS, DNS & TLS/SSL
- F5, VPNs & firewalls

Cloud & Networking:

- VPC routing & security controls
- Load balancing (ALB/NLB)
- IAM access control

Security & Operations

- CVE remediation
- Least-privilege access
- Qualys, Sophos, Security Onion
- CAB/change management
- Veeam backups/DR

Profile

Observability-focused infrastructure reliability engineer experienced in modernizing monitoring platforms across multi-tenant AWS and VMware environments. Built monitoring automation, KPI/SLA dashboards, alert-quality improvements, and synthetic workflows supporting 20+ product teams and 680+ production systems.

Professional Experience

CAI, IT Operator | DevOps Team

01/2022 – Present | Pittsburgh, PA

- Owned and modernized enterprise observability across multi-tenant AWS and VMware environments supporting 20+ product teams and 680+ customer-facing production systems.
- Built Grafana KPI/SLA dashboards for uptime, incident trends, alert volume, MTTR/MTTD, SLA compliance, template hygiene, tagging quality, and monitoring configuration gaps.
- Improved alert quality and incident triage through trigger tuning, metadata standardization, and aggregate service-impact alerting that reduced cascaded web-check noise.
- Reduced manual monitoring onboarding effort by ~95% by automating host setup, template assignment, web-check lifecycle updates, metadata alignment, and agent remediation.
- Built a JSON-driven browser synthetic monitoring framework using Zabbix 7 Browser items, Docker-based Selenium, dynamic step-level metrics, debug tracing, and AI-assisted workflow translation, reducing developer onboarding friction.
- Expanded Kubernetes observability across VMware and AWS environments using Helm, exporters, HTTP agents, preprocessing, and Grafana dashboards.
- Executed Zabbix 4.x to 6.x and 6.x to 7.x migrations, rebuilding templates, modernizing syntax, updating automation, coordinating cutovers/CAB approvals, onboarding users, remediating CVEs, and rebuilding critical monitoring infrastructure.

Ultimate Tech Solutions, Operations Manager

03/2020 – 12/2021 | Falconer, NY

- Led SMB infrastructure assessments, upgrade planning, networking deployments, remote access solutions, and disaster recovery recommendations.
- Managed client-facing infrastructure projects from discovery through implementation, translating technical risk, upgrade needs, and business impact into stakeholder reports.
